What worked well?

According to tutor’s opinion, the most successful session was that about life cycle of a plant (week 7).

This activity worked the best because we figured out to find a video about it, and most of the students had studied it at their school. One student (may be Egide I don’t remember well) told me that on Monday, after this session he got a test at school about it, and got 9/10 as he forgot only one thing. Another reason to that, when on our last session we were doing a review students draw it well, and answered correctly all questions related to life-cycle of plants. It was so exciting!

Areas for improvement:

If this project runs again, it would be better to include an facilitating way to students such as providing transport fees and an award to the best performers. Organizing the quizzes and mark them to be able to award the best performers with a fact.

Students make long travels from their homes and reach at our school so tired. It become worse when it is in a raining season. It will be better if they are given some money for a moto or taxi.

What did not work is that only few students attended regularly. This affected others to think that it is okay to miss class or be late. As a consequence, some students don’t masters whatever is on the curriculum except those who attended regularly.

Feedback from children:

Students enjoyed growing their own plants in soil and in water in a bottle that they have decorated by themselves. They also enjoyed English listening exercises that they were given, as they are excited to learn this language at the level of being translators like we were.

They also enjoyed learning new vocabulary and it increased their confident in English. One student Keza Merveille told us that she used to have 53% in English quizzes, and she is having 97%.
What they did not enjoy is to have their plants start germinating, and fall at the last as the plants were not fertilized with the miracle grow as it happened in the camp.

Comments on the school reports as shown in spreadsheet

It is evident that there was a good performance of children when looking at school reports. There was a good success compared to last year. This program has had a very positive impact on their results, especially in English and science. We are pleased with the positive impact has had on their knowledge.
