The Utah Medical Association is happy to support the Bateman Horne Center’s application to your Foundation. BHC has been singularly involved with medical innovation related to ME/CFS and FM and educating health care professionals to better understand, diagnose, and treat these illnesses. UMA Foundation continues to support BHC in parallel professional educational efforts.

UMA recognizes the need for more health care providers to be recruited and trained to provide more access to the thousands of individuals impacted by this illness and supports BHC’s efforts to expand capacity to offer these specialty services to more patients. BHC is committed to empower patients by providing them with information about their diseases and using evidence-based research to improve diagnosis and clinical care to move toward precision medicine for ME/CFS and FM.

Last year, UMA supported BHC’s efforts to educate patients using a series of online videos. These videos reached thousands of patients in Utah giving patients expert information to improve access to care and management of their disease.

We highly recommend the Sorenson Legacy Foundation support the medical innovation and professional education at the Bateman Horne Center to bring ME/CFS and FM into the medical mainstream.
