

Sowing Opportunities' strategic plan for 2022

Sowing Opportunities' expert agricultural engineer is able to come to the village of Chajmaic, Guatemala for 6-8 weeks, starting in early April, to set up mini greenhouses as a pilot project in the backyards of 30 committed families to teach them to grow corn and black beans and teach them to teach others.

The cost for everything - supplies, seeds, soil, fertilizer, equipment, salaries - for 6-8 weeks is \$20,000. At this moment, we have less than \$12,000 less to raise!

We have several plans of how to raise this, including approaching local businesses with a proposal and budget.

Thus, we have a monetary goal, a date, a project expectation, and the commitment of the agricultural engineer and 30 families!
